

# eSTONE Casestudy

*eNoah effect on the Enterprise*

## Overview

eStone is an end to end Procurement solution which primarily aims to fit Granite and Marble industries. The selection and implementation of ERP has two key drivers- Managing Business Process and Enhanced Reporting. eStone provides the functionalities that are needed for most of the Small and Medium Business organizations.

## Business Challenges

The challenges faced by us were

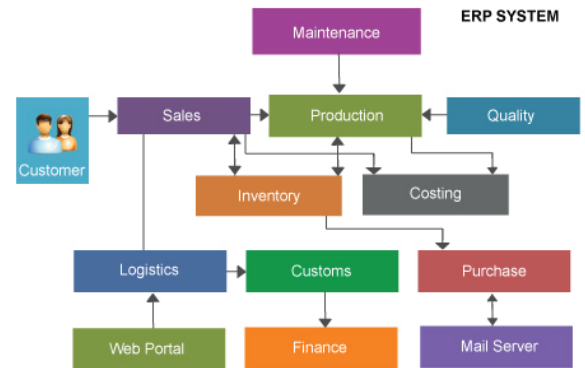

- Manual tracking of sales, purchases, invoices and stocks
- Reports are generated manually
- Operations for Multiple branches stocks were maintained individually
- Manual tracking resulted in less accuracy and delay in processing
- Integrating with financial application (Tally)
- Creating a financial report which involves complex logics & calculations
- Integrating multiple branches into a centralized portal

## Our Solution

The actions we took to address these challenges were

- Understanding the existing templates and translating them on the database tables
- We built the entire ERP system to incorporate all the major modules like Sales, Production, Quality, Inventory, Costing and much more under one roof

- Created a customized component to generate the output format, which would be an input format to the Tally (Financial software) to consume, thus enabling us to feed financial data from our system to tally efficiently.

## Key Benefits

Our solutions resulted in

- Eliminated the manual entry, minimized the errors, and increased the accuracy, thus allowing the company to be more productive and efficient
- Provided reports for all the modules, allowing management to see stocks and sales data anytime
- End to end production process taken care as tasks, allowing staff to view or update the status, enabling the production leads to track the production process in-time.
